Personal Profile

MSc (Cybersecurity) student targeting Cloud and DevOps roles. Built projects around IAM, CI/CD, and container security using Docker, Kubernetes, Helm, and ArgoCD. Automated pipelines with GitHub Actions, provisioned infrastructure with Terraform, and enforced supply chain security with Trivy, Cosign, and Kyverno all on AWS with a focus on least-privilege access and production-grade observability.

Technical Skills

Cloud & AWS: EC2, IAM, S3, VPC, CloudWatch, CloudTrail, Systems Manager, ECR

DevOps: Linux, Terraform, Docker, Kubernetes, Helm, ArgoCD, GitLab CI, GitHub Actions

Security: Trivy, Cosign, Falco, SonarCloud, SealedSecrets, CrowdSec

Observability: Prometheus, Grafana, Datadog, Loki, Alertmanager, OpenTelemetry

Languages: Go, Python, TypeScript, Bash, SQL, HCL

Experience

AWS Infrastructure Engineering

August 2025 – Present

Skill Builder

Remote

- Configured IAM with **least-privilege separation** between admin and operational access across users, groups, and roles
- Built CloudWatch dashboards with CPU alarms at **80%** threshold to detect and alert on resource spikes in real time.
- Provisioned EC2 with key-based auth; audited billing, identified **3 cost drivers**, and applied right-sizing across instances.
- Designed a **multi-tier VPC** with public/private subnets, NAT gateway, VPC peering, security groups.

Projects

AegisMesh - IAM [↗](#) | Node.js, PostgreSQL, Docker, Kubernetes, ArgoCD, ECR, Terraform, Grafana, Datadog

- Built a **deny-first** IAM policy engine with role inheritance and simulation; auth covers **TOTP MFA**, **OAuth 2.0**, JWT refresh rotation, and step-up verification for sensitive actions.
- CI runs **SonarCloud** quality gates and **CodeQL** on every PR - cut security issues **87.4%** in 30 days; CD builds multi-stage **Docker** images, pushes to **AWS ECR**, and patches **Kustomize** overlays via **ArgoCD**.
- Deployed a **FastAPI** risk engine scoring logins against IP, time, and behavior signals; model versions tracked in **MLflow** via a retraining **CronJob**; high scores trigger step-up **MFA** or block the request.
- Init containers gate app start on Postgres readiness and **Prisma** migrations; **SealedSecrets** keep credentials out of plaintext Git; **Falco** streams syscall alerts to **Datadog** Security Signals; **Datadog APM** traces requests across Node.js and Python; **Prometheus + Loki + Grafana** cover metrics and logs; **Terraform** provisions ECR and EC2.

HookDrop - Webhook Receiver [↗](#) | Go, Kubernetes, Helm, ArgoCD, Trivy, Cosign, Kyverno, AWS ECR, GitHub Actions

- Webhook capture service in Go - accepts any POST to a bucket URL, stores last 50 events in-memory, and streams arrivals live via SSE with trace ID logging.
- GitOps** pipeline - GitHub Actions runs **Trivy** scans, signs images with **Cosign** OIDC, pushes to **AWS ECR**, and bumps Helm values so ArgoCD syncs automatically. Renovate handles dependency PRs.
- Hardened runtime - non-root UID, read-only filesystem, dropped capabilities. **Kyverno** blocks latest tags, missing resource limits, and unsigned images at admission. **OpenTelemetry** traces, **Prometheus** metrics, and **Loki** logs feed Grafana with **Alertmanager** on top.

Community

Google Student Ambassador – Gemini

2026 – Present

Google

- Conducted **5+ peer interviews** gathering student feedback on AI tool adoption for Google's Gemini ambassador initiative.
- Led Gemini demos at **CHARUSAT University**, showcasing AI-assisted debugging, documentation, and developer workflows.

Education

Charotar University of Science and Technology (CHARUSAT)

Nadiad, Gujarat

Bachelor of Computer Applications | CGPA: 8.9

2023 – 2026

Gujarat Law Society (GLS)

Ahmedabad, Gujarat

Master of Science (Cyber Security)

2026 – 2028

Certifications

AWS Cloud Practitioner Essentials [↗](#)

AWS Cloud Quest: Cloud Practitioner [↗](#)
