Professional Summary

Cybersecurity MSc student targeting entry-level Cloud and DevSecOps roles. Built projects spanning AWS infrastructure, Kubernetes GitOps pipelines, deny-first IAM, and ML-based authentication risk controls — using Terraform, Argo CD, and policy-as-code to automate secure container delivery.

Technical Skills

Cloud & Infrastructure: EC2, ECR, IAM, S3, VPC, CloudWatch, CloudTrail, AWS Systems Manager, Terraform
DevOps: Linux, Git, Docker, Kubernetes, Helm, Kustomize, Argo CD, GitHub Actions
Security: Trivy, Cosign, Kyverno, SealedSecrets, Falco, CodeQL, SonarCloud
Observability: Prometheus, Grafana, Loki, Tempo, Datadog, OpenTelemetry
Languages & Data: Go, Python, JavaScript, Bash, SQL, HCL, PostgreSQL

Projects

Bastion — IAM Platform | [GitHub](#) [Website](#)

2025 - Present

Node.js, PostgreSQL, FastAPI, Docker, Kubernetes, Terraform, AWS EC2/ECR, Argo CD, MLflow, Falco, Datadog

- Built a deny-first IAM platform with dynamic RBAC and policy simulation; implemented Google and GitHub login, TOTP MFA, refresh-token rotation, session revocation, and step-up reauthentication.
- Automated CI with tests, linting, and SonarCloud/CodeQL/Trivy scans, reducing security issues by **87.4%** in **30 days**; pushed commit-SHA images to ECR and promoted them via Argo CD to a Terraform-provisioned EC2 cluster.
- Deployed a FastAPI Isolation Forest service that triggers step-up authentication for risk scores above **0.7**; scheduled **daily** retraining on up to **10,000 audit records** with model versioning in MLflow.
- Hardened containers as non-root **UID 10001** with read-only application files and dropped capabilities; encrypted Git-stored secrets with SealedSecrets and routed Falco runtime alerts to Datadog Security Signals.

HookDrop — Webhook Receiver | [GitHub](#) [Website](#)

March 2026

Go, Kubernetes, Helm, Argo CD, Trivy, Cosign, Kyverno, OpenTelemetry, Prometheus, Grafana

- Built **3 Go endpoints** buffering the latest **50 events** per bucket and streaming arrivals over SSE with **sub-35 ms latency**, preserving full headers, body, source IP, and trace context.
- Automated a GitOps pipeline — GitHub Actions runs Trivy scans, signs images with Cosign OIDC, and pushes to ECR; Argo CD auto-syncs via Helm, with Renovate managing dependencies.
- Hardened Kubernetes delivery with non-root execution, read-only filesystems, resource limits, HPA, NetworkPolicy, and Kyverno signature verification; exported traces, metrics, and logs to Grafana via Tempo, Prometheus, and Loki.

Kost — Kubernetes Cost Agent | [GitHub](#) [Website](#)

May 2026

Go, client-go, Kubernetes Metrics API, Docker, Kubernetes RBAC, Prometheus, Slack API

- Built a Go agent that targets over-provisioning waste in Kubernetes clusters, polling the Metrics API every **15 minutes** and flagging workloads when resource requests exceeded **1.5 times** observed usage and projected waste exceeded **\$5 per month**.
- Traversed the Pod → ReplicaSet → Deployment ownership chain to generate copy-paste-ready kubectl set resources commands at **1.3 times** observed usage, with minimum CPU and memory safeguards.
- Shipped as a single, non-root pod (**~25 MB**) with a read-only ClusterRole blocking write, delete, exec, and secret access; exposed Prometheus metrics, a dashboard, and optional Slack alerts.

Education

Gujarat Law Society (GLS)

Master of Science in Cybersecurity

Ahmedabad, Gujarat
2026 – Expected 2028

Charotar University of Science and Technology (CHARUSAT)

Bachelor of Computer Applications | CGPA: 8.9/10

Nadiad, Gujarat
2023 – 2026

Training and Badges

- AWS Skill Builder: Cloud Practitioner Essentials
- AWS Cloud Quest: Cloud Practitioner badge
